Note:

1. Green fodder production is estimated assuming an average yield per hectare of 1.5 tonnes from the forest areas, 0.75 tonnes from permanent pastures and grazing lands and 40 tonnes from cultivated areas.
2. For dry fodder, production of various crops are projected using growth trends and crop residue production is estimated using standard conversion ratios for cereals, pulses and oilseeds.
3. Total fodder is the sum of dry and green fodder production.
4. Areas under Forests, Fodder crops and Permanent pastures etc. for these years have been projected based on past data.
